## Galcon AC9 Series Computerized Irrigation Controller

### Features:

Mains current operated controller for automatic operation of municipal irrigation systems and landscaping.

- ❖ Operation of 9 valves plus a master valve (or pump to increase the pressure)
- ❖ Operation of 2 valves simultaneously plus a master valve
- ❖ Separate irrigation schedule programmable for each valve
- ❖ Up to 4 irrigation activations per day per valve in programmable weekly schedule mode
- ❖ Programmable weekly/cyclical irrigation schedules
- ❖ Irrigation duration: one second to 12 hours
- ❖ Irrigation duration variable according to percentage value
- ❖ Irrigation frequency from once every minute to once every 30 days in cyclical program
- ❖ Manual operation of individual valves via the irrigation controller
- ❖ Valve assignment lockout sensor
- ❖ Identification of short circuits in the system, disconnection of shorted valve and a visual alarm
- ❖ Use of 24 VAC electric valves
- ❖ Operation by means of a 240 VAC transformer
- ❖ 9 V battery program backup
- ❖ Controller programmable using a backup
