

## WB ULTRA-MAX

### Clear non-slip sealer

WB ULTRA-MAX incorporates a clear polymer aggregate with a super tough, water based sealer that provides maximum protection on all types of concrete, unpolished stone, terrazzo and unglazed tiles and pavers. It is suitable for areas that are exposed to the elements such as entry foyers and decks, as well as factory and warehouse floors. Its non yellowing film is tough, glossy and chemical resistant. More importantly, it dries and cures quickly to enable fast re-use (very important in areas such as loading docks, hospitals, entry foyers etc).

#### Summary of Advantages with WB ULTRA-MAX

- U.V. stabilised remains crystal clear under all conditions, so it will not yellow or soften, even in full sun.
- Will not water white (cloud) in damp conditions.
- Extremely low transfer from tyres.
- Recoats easily.
- Solvent and odour free water based formula.
- Single product application (no base coat required).
- Ultra tough and long wearing.

The slip resistance achieved with ULTRA-MAX varies due to the micron size of the aggregate used.

ULTRA-MAX Fine will achieve a slip rating that is classified as a R11.

ULTRA-MAX Course will achieve a slip rating that is classified as a R12 or greater.
