

MEDIUM IMPACT | 308/708 Prescription Caution

308 Foreman and 708 Razor RX High Velocity Frame Only© systems have been developed to meet the needs of the new Australian Standard AS/NZS1337.6 'Prescription eye protectors against low and medium impact'.

If you need certified Medium Impact protection: Ensure your prescription safety glasses are compliant to this new standard by purchasing your frames from a participating optician who can arrange for your prescription to be filled by qualified personnel at a certified optical laboratory. Fully compliant prescription safety glasses will come back to you with a certificate of compliance.

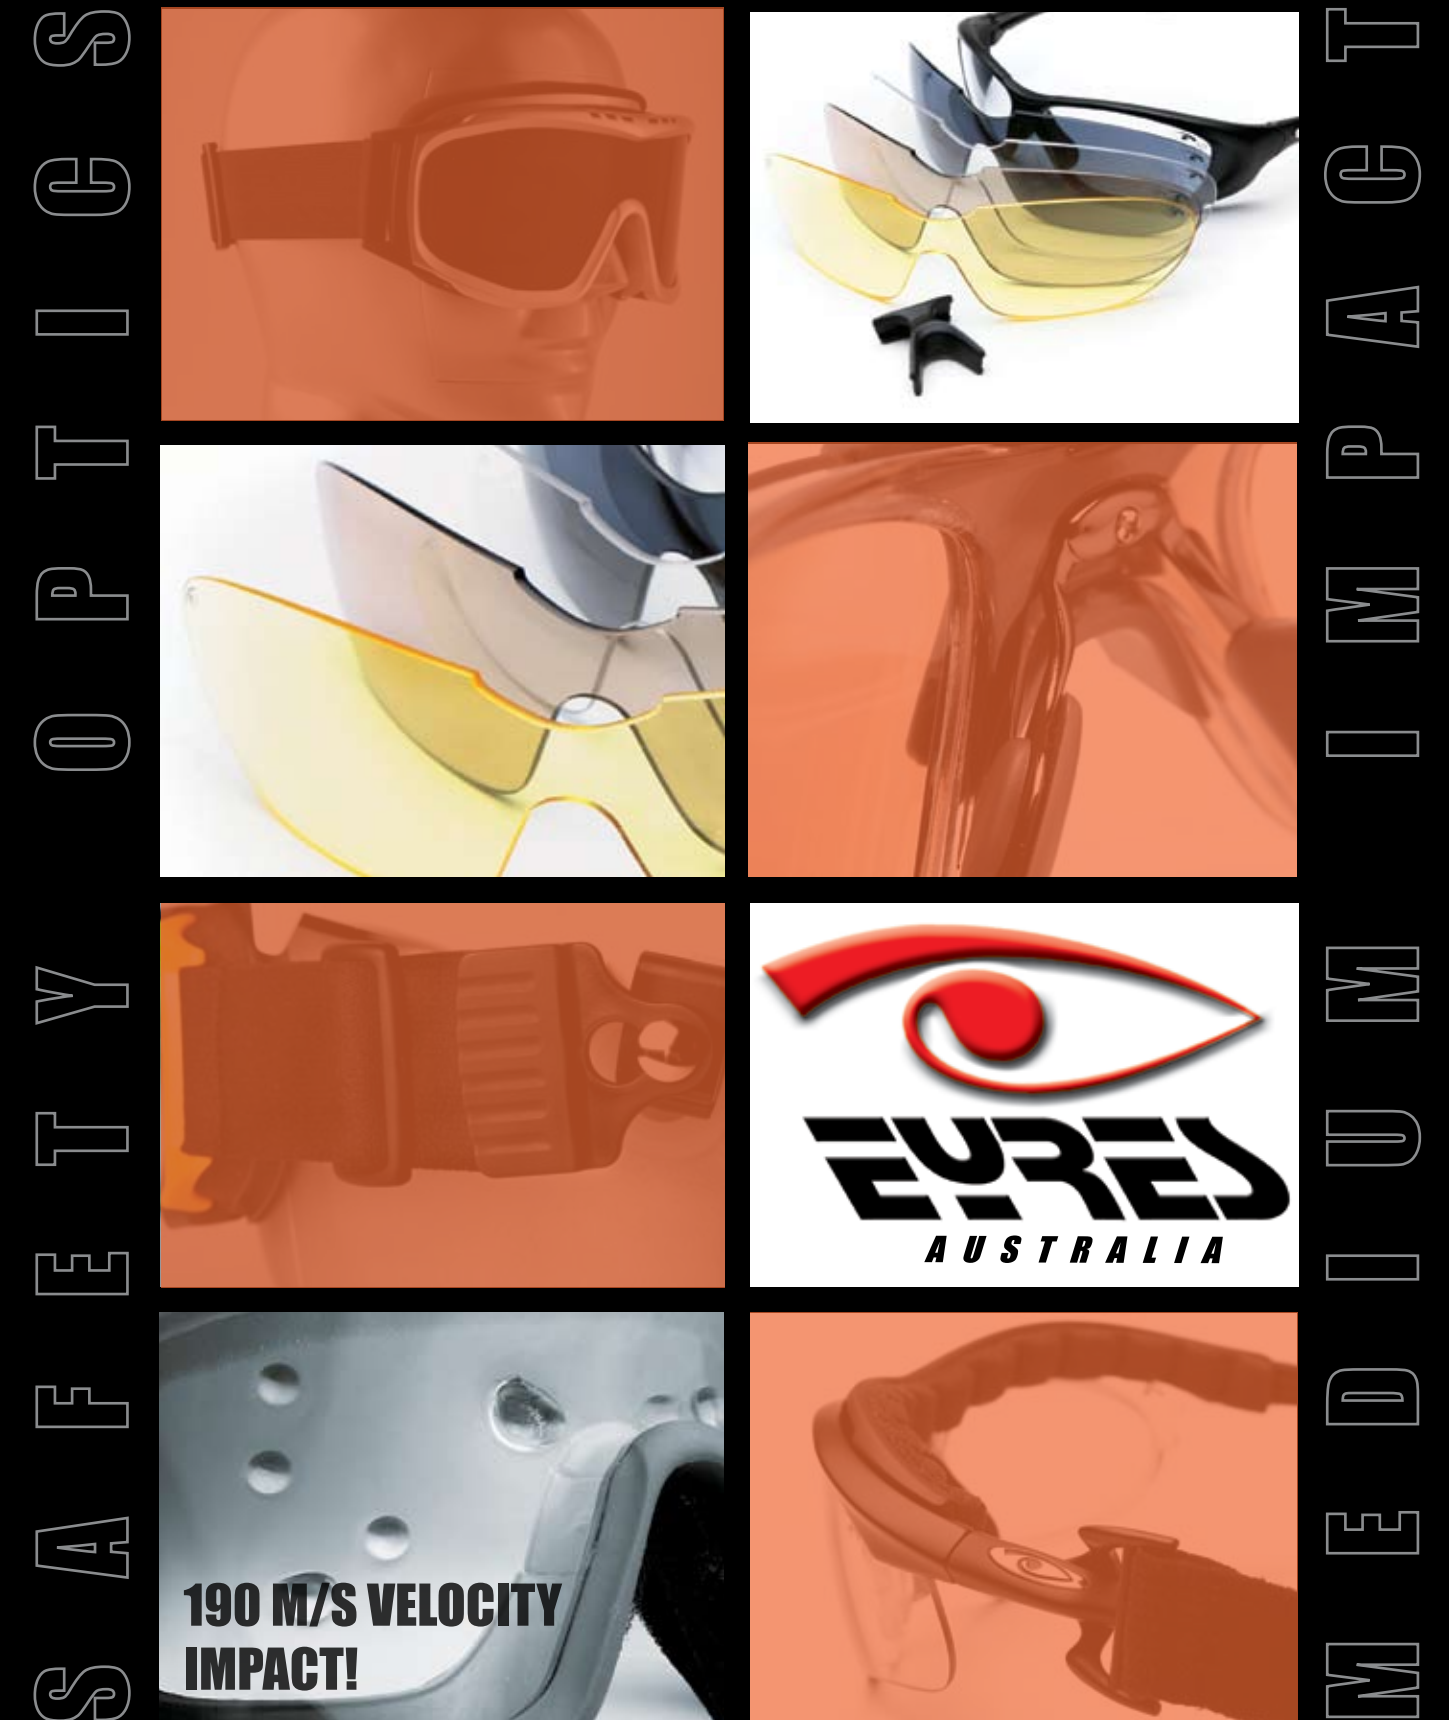

If you don't need certified Medium Impact protection: You may visit any optical dispenser or optician.

We welcome enquiries from all optical professionals who may be interested in supplying these specialty products to their customers.

For trade enquiries or to find a local participating optician please email: raylane.marketing@raylane.com.au.
