Rigid Collodion

When this product is applied to soft pliable skin, it will pull the skin together and form the appearance of a scar.

- Using a brush, apply a thin line to pliable skin (e.g. cheek area) which will allow the product to pucker the skin (if the skin is too tight, scarring will not be as successful).
- The scar will dry a slightly darker colour than the skin making it look real.
- The more layers applied, the deeper the scar will appear (allow to dry between layers).
- To make a scar appear old, use a medium brown eye pencil and lightly put colour down the middle, then use a brush to spread and soften the colour. To make a fresher scar, apply a medium pink colour and spread with a brush.
- To remove, just peel off or use **Spirit Gum Remover**.
