## Stage Blood

There are several kinds of blood to consider, each with it's own characteristics. Arterial is bright and Venous is dark.

- **Stage Blood** – Doesn't dry and will continue to drip away from application. This lifelike blood is non-toxic and so safe it's edible. Can be used in and around the mouth and in blood capsules.
- **Coagulated Blood** – Thick blood which will stay where it's put. Doesn't dry. Good for injuries and quick application and clean-up.
- **3-D Gel™ Blood Red** – This product will set and hold shape. Great for a realistic droplet shape.

The red in blood products may stain clothing and skin. Use **Barrier Spray™** to minimize staining of the skin.

For clothing, wash immediately after applying a pre-wash to the spot.
