Tattoo Covering

Step 1:

Clean tattoo and surrounding skin.

Step 2:

Choose the Tattoo Cover shade closest to skin tone and apply with a sponge.

Step 3:

Cover the entire design with a patting, not stroking motion.

Step 4:

Set Tattoo Cover with Colorset Powder.

Step 5:

Then apply cream makeup over Tattoo Cover (again with a patting motion).

Step 6:

If desired, stipple several skin tones over the area and add freckles to blend with the surrounding skin.

Professional Tips

For a matte finish, press Colorset Powder into final makeup design. Mist Barrier Spray over the area to seal and protect. Use to cover any skin flaw, the darkest tattoos, birthmarks and other skin discolourations.
