Mixing Liquid / Metallic Powders

When **Mixing Liquid** and the **Metallic Powders** are mixed together, they provide a very reflective shine that is sweat resistant and excellent for body painting.

- In a separate container, mix a small amount of **Mixing Liquid** with a small amount of **Metallic Powder**. The mixture should look like mercury. (The mixing liquid does evaporate, which is why we recommend you mix only small amounts at a time).
- The mixture can be applied to the skin and hair with a sponge, brush or airbrush and will cover a very large area.

Two bottles of powder to 1½ bottles of **Mixing Liquid** will cover a medium size body from head to toe. Removes easily with soap and water.

Metallic Powders are available in Gold, Silver, Copper and Bronze.
