Colorset™ Powder

This product is a light, colourless powder that should be used with all cream makeup. It will remove excess oils from the surface and set the makeup so it will not rub off easily. **Ultrafine Powders** are available in two sizes in Ultra White, Soft Beige or Neutral/Translucent.

- Simply apply a small amount to a powder puff. Gently work the powder into the puff material so it doesn't fall off.
- Press the powdered puff onto the makeup. Keep pressing until the powder disappears.
- If there is any excess, you can dust it off with a blush brush.
- To remove the powder haze, spray with **Barrier Spray™**.

Hint – Powder over one colour of makeup at a time. Apply the first colour then powder, apply the second colour then powder, and so on. If you try to powder a very detailed design all at once, you may transfer one colour onto another.
