Latex

Latex is a liquid rubber that dries clear. It is great for making prosthetic pieces, adhering crepe hair and creating 3-D aging effects.

- Latex should never be applied to fabric or hair, it will not surrender hair.
- There is no remover for latex, so caution should be taken when applying latex. To remove, gently pull away for the skin.
- You can speed up the drying process with a cool hair dryer.
- As layers are applied, the latex will take on an amber tint. Makeup will be applied to the finished product.
- For applying cream makeup, you must first apply **Castor Sealer** to the Latex, then wait 10 minutes and wipe off the **Castor Sealer** before applying makeup.
- Powder with **Colorset™ Powder** to set the makeup.
