DRILLING UPDATE

Target Energy Limited ("Target") (ASX CODE: TEX) is pleased to provide the following operations update. All reported depths are below the Rotary Table (RT) on the rig floor.

RIVIANA FOODS #1 (TECHE PROSPECT)

Report Date:	9:00 pm 09/01/08 (Western Aust Daylight Time) / 6:00 am 09/01/08 (USA Central Standard Time)
Current Depth:	3,481.2 metres RT
Progress:	Repair pressure control equipment. Drill ahead from 3,278.8m RT to 3,481.2m in 216mm (8 ½") hole. Lost circulation at 3,481.2m. Remedying circulation problems.
Hydrocarbon Indications	Hydrocarbon shows will only be reported after wireline logs have been run and evaluated at the Total Depth of the well. The well will take approximately four weeks to drill to the programmed Total Depth of 3,810 metres (12,500 feet).
Primary and Secondary Targets	Drilling at the Teche prospect will target up to 22.4 Bcfe of potential recoverable gas and condensate in Oligocene age "Bol mex 2" sands. Additional potential is recognised in a number of other sands which will also be tested in an optimal position.
Comment	Yesterday's lost circulation was not unexpected, having occurred at another local well at a similar depth. Lost Circulation Material (LCM) has been spotted in the hole and appears to have cured the fluid loss. Once circulation is confirmed to have been re-established, drilling will continue.

Target Energy will earn a 10% Working Interest in the well (subject to completion of earning phase).

BEYT #1 (BAYOU BERARD PROSPECT)

Report Date:	9:00 pm 09/01/08 (Western Aust Daylight Time) / 6:00 am 09/01/08 (USA Central Standard Time)
Current Depth:	3,100.5 metres RT
Progress:	Ream hole from from 2,872.8m RT to 3,063.8 m RT. Run casing to 3,063.8m RT. Make repairs to pressure control equipment. Drill ahead from 3,063.8m RT to 3,100.5 mRT.
Hydrocarbon Indications:	Hydrocarbon shows will only be reported after wireline logs have been run and evaluated at the Total Depth of the well.
Primary and Secondary Targets	The well will test sands in the Marg Tex section in an as yet undrilled fault segment on the south-eastern margin of the Section 28 salt dome. Various Marg Tex sands have produced commercial oil and/or gas in every fault

segment tested at Section 28. The well at Bayou Berard will potentially prove up 1.8 million barrels of oil and 0.72 billion cubic feet of gas (recoverable) and will take approximately 30 days to reach its programmed Total Depth at 3,444 metres (11,300 ft). A second well will be required to fully drain these volumes.

Target has a 15% Working Interest in the Beyt #1 (Bayou Berard) well.

While operations are underway, the company will issue routine releases every Thursday or at any such time that material matters require an earlier release.
